

final test 01

Congratulations!

You completed this test on 02/04/2025
at 18:54

✓ Passed

||□ Which of these is an example of ordinal data? ✓

- ☐ Blood type (A, B, AB, O)
- ☒ Grades in school (A, B, C)
- ☐ Number of pets owned
- ☐ Temperature in Celsius

||□ How do you reshape a NumPy array `arr` to have 3 rows and 4 columns? ✗

- ☐ `arr.resize(3,4)`
- ☒ `arr.reshape(3,4)`
- ☒ `arr.reshape((3,4))`
- ☐ `arr.shape(3,4)`

||□ How do you create an array with values ranging from 1 to 10 in NumPy? 

- ☐ np.range(1,10)
- ☒ np.arange(1,11)
- ☐ np.linspace(1,10)
- ☐ np.list(1,10)

||□ The normal distribution is: 

- ☐ Skewed left
- ☒ Bell-shaped and symmetric
- ☐ Uniformly distributed
- ☐ Bimodal

||□ Which distribution shape can a histogram help identify? 

- ☐ Normal
- ☐ Skewed
- ☐ Bimodal
- ☒ All of the above

||□ A dataset with multiple modes is called: 

- ☐ Unimodal
- ☐ Bimodal
- ☒ Multimodal
- ☐ Nonmodal

||□ The mode represents:

- ☐ The average value of a dataset
- ☒ The value that occurs most frequently
- ☐ The middle value of the dataset
- ☐ The spread of data

||□ In a normal distribution, the mean, median, and mode are:

- ☐ Different
- ☒ Equal
- ☐ Random
- ☐ Always zero

||□ How can you assign a default value to a function argument in R?

- ☐ By assigning it in the function body
- ☐ Using the default() function
- ☒ Assigning a value in the argument list
- ☐ Using the set() function

||□ In ggplot2, which function is used for a histogram?

- ☒ geom_histogram()
- ☐ geom_col()
- ☐ geom_bar()
- ☐ geom_density()

||□ What is the output of if (FALSE) print("Hello")? 

- ☐ Hello
- ☐ FALSE
- ☐ NULL
- ☒ No output

||□ In ggplot2, which geom function is used to create a line plot? 

- ☐ geom_bar()
- ☒ geom_line()
- ☐ geom_histogram()
- ☐ geom_col()

||□ A null hypothesis is: 

- ☒ A statement of no effect or no difference
- ☐ Always true
- ☐ A claim of significant effect
- ☐ Randomly chosen

||□ How do you create an infinite loop in R? 

- ☐ while(TRUE) { ... }
- ☐ for (i in 1:Inf) { ... }
- ☐ repeat { ... }
- ☒ All of the above

||□ In base R, which argument in heatmap() controls clustering? 

- ☐ scale
- ☐ clustering
- ☒ hclustfun
- ☐ col

||□ What does np.array([1, 2, 3]) return? 

- ☐ A list
- ☒ A NumPy array
- ☐ A tuple
- ☐ A dictionary

||□ Which type of plot is most useful for detecting outliers? 

- ☒ Box plot
- ☐ Line plot
- ☐ Histogram
- ☐ Scatter plot

||□ Type I error occurs when: 

- ☒ Rejecting a true null hypothesis
- ☐ Accepting a true null hypothesis
- ☐ Rejecting a false null hypothesis
- ☐ No error is made

||□ In ggplot2, how do you convert a bar chart into a pie chart? 

- ☒ Add coord_polar(theta = "y")
- ☐ Use geom_pie()
- ☐ Apply facet_wrap()
- ☐ Change geom_col() to geom_point()

||□ What visualization is best for checking if a dataset follows a normal distribution? 

- ☒ Histogram
- ☐ Scatter plot
- ☐ Bar chart
- ☐ Pie chart

||□ **Scenario:** Employee Age Study 

A survey is conducted to study the age distribution of employees in a company. The ages are measured in whole years (e.g., 25, 30, 35).

Question: What type of data is represented by the ages of employees?

- ☐ Continuous
- ☐ Nominal
- ☒ Discrete
- ☐ Ordinal

||□ Which chart should be used to analyze the relationship between three numerical variables? 

- ☒ Scatter plot with color mapping
- ☐ Pie chart
- ☐ Histogram
- ☐ Box plot

||□ If you want to visualize the proportion of missing values in a dataset, which type of plot is most useful? 

- ☐ Bar chart
- ☒ Heatmap
- ☐ Histogram
- ☐ Line plot

||□ Data such as "Yes" or "No" is: 

- ☐ Discrete data
- ☐ Continuous data
- ☒ Nominal data
- ☐ Ordinal data

||□ Which Seaborn function is best for visualizing categorical data? 

- ☐ sns.barplot()
- ☐ sns.countplot()
- ☐ sns.scatterplot()
- ☒ Both a) and b)

||□ How do you generate a random number between 0 and 1 in NumPy? ✓

- ☐ np.random.rand()
- ☐ np.random.random()
- ☐ np.random.randint(0,1)
- ☒ Both a) and b)

||□ Which visualization is best for showing the distribution of a numerical variable? ✓

- ☒ Histogram
- ☐ Bar Chart
- ☐ Line Plot
- ☐ Scatter Plot

||□ What is the best visualization for correlation between multiple numerical variables? ✓

- ☒ Heatmap
- ☐ Pie Chart
- ☐ Line Plot
- ☐ Histogram

||□ How do you add a legend to a Matplotlib plot? ✓

- ☒ plt.legend()
- ☐ plt.add_legend()
- ☐ plt.show_legend()
- ☐ plt.make_legend()

||□ Which function is used to create violin plots in Seaborn?

- ☒ `sns.violinplot()`
- ☐ `sns.boxplot()`
- ☐ `sns.stripplot()`
- ☐ `sns.scatterplot()`

||□ Which method is used to drop rows with missing values?

- ☒ `df.dropna()`
- ☐ `df.fillna()`
- ☐ `df.remove_na()`
- ☐ `df.dropna(axis=1)`

||□ What does `sns.pairplot(df)` do?

- ☒ Creates scatter plots for all pairwise relationships
- ☐ Plots a single histogram
- ☐ Shows a bar chart of categorical values
- ☐ Draws a heatmap

||□ How do you change the color palette in Seaborn?

- ☒ `sns.set_palette("pastel")`
- ☐ `sns.set_theme("colorful")`
- ☐ `sns.color_map("red")`
- ☐ `sns.set_color("blue")`

||□ What is the best plot for time-series data? 

- ☒ Line Chart
- ☐ Bar Chart
- ☐ Pie Chart
- ☐ Scatter Plot

||□ How do you generate a random integer between 10 and 100? 

- ☒ `np.random.randint(10,100)`
- ☐ `np.random.random(10,100)`
- ☐ `np.random.uniform(10,100)`
- ☐ `np.random.normal(10,100)`

||□ What does `plt.xlabel("X-axis")` do? 

- ☐ Adds a title
- ☒ Labels the X-axis
- ☐ Labels the Y-axis
- ☐ Adds a legend

||□ Which function creates a heatmap in Seaborn? 

- ☒ `sns.heatmap()`
- ☐ `sns.correlationplot()`
- ☐ `sns.matrixplot()`
- ☐ `sns.gridplot()`

||□ What argument is used to change the line color in plt.plot()?

- ☒ color
- ☐ fill
- ☐ linecolor
- ☐ shade

||□ Which Seaborn function is used to create a histogram?

- ☒ sns.histplot()
- ☐ sns.distplot()
- ☐ sns.barplot()
- ☐ sns.scatterplot()

||□ What does arr[1:4] return in NumPy?

- ☐ Elements from index 1 to 4
- ☒ Elements from index 1 to 3
- ☐ Elements from index 0 to 3
- ☐ Elements from index 2 to 4

||□ How do you reset the index of a Pandas DataFrame?

- ☐ df.index_reset()
- ☐ df.reindex()
- ☒ df.reset_index()
- ☐ df.drop_index()

How do you load built-in datasets in Seaborn?

- ☐ sns.datasets.load_dataset()
- ☒ sns.load_dataset()
- ☐ sns.get_data()
- ☐ sns.read_data()

Which argument in geom_density() controls the transparency of the curve?

- ☒ alpha
- ☐ color
- ☐ size
- ☐ linetype

In base R, what function is used to create multiple box plots in one plot?

- ☒ boxplot(var1, var2, ...)
- ☐ plot.boxplot()
- ☐ multi.boxplot()
- ☐ box(var1, var2, ...)

What does the diagonal in a pair plot represent?

- ☐ Box plots
- ☒ Histograms of each variable
- ☐ Correlation values
- ☐ Scatter plots

||□ Which chart is best suited for showing time-series data? 

- ☐ Heatmap
- ☒ Line chart
- ☐ Scatter plot
- ☐ Bar chart

||□ How do you select a single column from a Pandas DataFrame? 

- ☐ df.column_name
- ☒ df['column_name']
- ☐ df.column['name']
- ☐ df[[column_name]]

||□ Which method displays the first 5 rows of a DataFrame? 

- ☒ df.head()
- ☐ df.first()
- ☐ df.display()
- ☐ df.show()

||□ Which parameter controls point size in geom_point()? 

- ☒ size
- ☐ pointsize
- ☐ width
- ☐ alpha

||□ Which chart is best suited for showing trends over time? 

- ☐ Histogram
- ☒ Line plot
- ☐ Pie chart
- ☐ Box plot

||□ Which function is used to create a pie chart in base R? 

- ☐ barplot()
- ☒ pie()
- ☐ hist()
- ☐ plot()

||□ What function is used to create a bar chart in base R? 

- ☒ barplot()
- ☐ hist()
- ☐ plot()
- ☐ pie()

||□ What will the following code output?

```
greet <- function(name = "Guest") {  
  paste("Hello,", name)  
}  
greet()
```

- ☐ Error
- ☒ Hello, Guest
- ☐ Null
- ☐ Guest

||□ What is the output of the following code?

```
add <- function(x, y) { x + y }  
add(3, 5)
```

- ☒ 8
- ☐ 15
- ☐ Error
- ☐ 3

||□ Which of these returns the first conditionally true expression?

- ☐ ifelse()
- ☒ switch()
- ☒ case_when()
- ☐ else

What will be the result of $3^2 + 2 * 3$ in R?

- ☒ 15
- ☒ 18
- ☐ 21
- ☐ 27

What is the data type of `c(TRUE, FALSE, TRUE)`?

- ☐ Numeric
- ☒ Logical
- ☐ Character
- ☐ Complex

What does `df.fillna(0)` do?

- ☒ Replaces all missing values with 0
- ☐ Removes all missing values
- ☐ Deletes the entire DataFrame
- ☐ Drops rows with missing values

What function in Seaborn is used for KDE (Kernel Density Estimation) plots?

- ☒ `sns.kdeplot()`
- ☐ `sns.histplot()`
- ☐ `sns.densityplot()`
- ☐ `sns.scatterplot()`

||□ What function returns the shape of a NumPy array? 

- ☐ shape()
- ☒ arr.shape
- ☐ arr.size
- ☐ arr.dimension

||□ What is the main advantage of a scatter plot? 

- ☐ Shows categorical relationships
- ☒ Displays correlations between two numerical variables
- ☐ Highlights median values
- ☐ Represents time series data

||□ What is the correct function for density plots in ggplot2? 

- ☒ geom_density()
- ☐ geom_histogram()
- ☐ geom_boxplot()
- ☐ geom_col()

||□ Which function is used in ggplot2 for bar charts? 

- ☒ geom_bar()
- ☐ geom_point()
- ☐ geom_line()
- ☐ geom_histogram()

||□ What does the return() function do in R?

- ☐ Exits the program
- ☒ Exits the function and returns a value
- ☐ Returns to the start of a loop
- ☐ Returns nothing

||□ What happens when break is used in a loop?

- ☐ Skips to the next iteration
- ☒ Exits the loop
- ☐ Stops the R session
- ☐ Restarts the loop

||□ What does the %in% operator do in R?

- ☐ Performs element-wise addition
- ☒ Checks for membership
- ☐ Combines two vectors
- ☐ Assigns a value

||□ Which function converts a numeric vector into a character vector?

- ☐ as.numeric()
- ☒ as.character()
- ☐ as.logical()
- ☐ as.vector()

||□ Which method creates an array of zeros in NumPy?

- ☒ np.zeros()
- ☐ np.ones()
- ☐ np.empty()
- ☐ np.full()

||□ What is the correct syntax for a for loop in R?

- ☒ for (i in 1:5) { print(i) }
- ☐ for i in range(1:5):
- ☐ for i from 1 to 5:
- ☐ loop (i in 1:5) { print(i) }

||□ Which measure is most affected by outliers?

- ☒ Mean
- ☐ Median
- ☐ Mode
- ☐ Interquartile range

||□ Which function creates a box plot in base R?

- ☐ hist()
- ☒ boxplot()
- ☐ barplot()
- ☐ density()

||□ Which is not a measure of central tendency? 

- ☐ Mean
- ☐ Median
- ☐ Mode
- ☒ Standard deviation

||□ The alternative hypothesis represents: 

- ☐ The status quo
- ☒ The presence of an effect or difference
- ☐ No relationship in data
- ☐ A sample statistic

||□ Simple random sampling ensures: 

- ☒ Equal chance for every population member to be selected
- ☐ Selection based on convenience
- ☐ Grouping data into clusters
- ☐ Proportional selection of subgroups

||□ Which of the following is an example of a random variable? 

- ☒ Number of heads in 10 coin tosses
- ☐ A fixed value like 3.14
- ☐ A qualitative description like "red"
- ☐ None of the above

 In a normal distribution, about 99.7% of data falls within how many standard deviations? 

- ☐ 1
- ☐ 2
- ☒ 3
- ☐ 4

 What is the total area under a normal distribution curve? 

- ☐ 0.5
- ☒ 1
- ☐ 2
- ☐ 10

 The standard normal distribution has a mean of: 

- ☐ 1
- ☒ 0
- ☐ -1
- ☐ Undefined

 Approximately what percentage of data falls within 1 standard deviation of the mean in a normal distribution? 

- ☐ 50%
- ☒ 68%
- ☐ 95%
- ☐ 99%

||□ Which measure of dispersion is most robust to outliers? 

- ☐ Standard deviation
- ☐ Range
- ☐ Variance
- ☒ Interquartile range (IQR)

||□ Range is defined as: 

- ☒ The difference between the highest and lowest values
- ☐ The average of the dataset
- ☐ The most frequently occurring value
- ☐ The middle value of the dataset

||□ The classification of data into male and female is an example of: 

- ☒ Nominal data
- ☐ Ordinal data
- ☐ Interval data
- ☐ Continuous data

||□ Which measure of dispersion is most sensitive to outliers? 

- ☒ Range
- ☐ Interquartile range
- ☐ Standard deviation
- ☐ Median

||□ If the mean of 10 numbers is 15, the sum of the numbers is:

- ☒ 150
- ☐ 15
- ☐ 10
- ☐ 100

||□ What is IBM Watson Studio primarily used for?

- ☐ Cloud storage
- ☒ Data science and AI model development
- ☐ Web hosting
- ☐ File management

||□ Which programming languages are supported in IBM Watson Studio for data visualization?

- ☒ Python and R
- ☐ Java and C++
- ☐ HTML and CSS
- ☐ Swift and Kotlin

||□ Which tool in IBM Watson Studio is specifically used for interactive data visualization?

- ☐ Watson Assistant
- ☒ Data Refinery
- ☐ Watson Discovery
- ☐ AutoAI

IBM Watson Studio uses which popular Python libraries for visualization?

- ☒ Matplotlib and Seaborn
- ☐ NumPy and Pandas
- ☐ TensorFlow and PyTorch
- ☐ SQL and MongoDB

What is the primary advantage of using IBM Watson for data visualization?

- ☐ Only experts can use it
- ☒ No programming is required for basic visualizations
- ☐ It only works with structured data
- ☐ It does not support interactive charts

Which type of chart is best for showing trends over time in Watson Studio?

- ☐ Bar Chart
- ☒ Line Chart
- ☐ Pie Chart
- ☐ Scatter Plot

When analyzing the distribution of a single numeric variable, which visualization should you use?

- ☐ Histogram
- ☐ Pie Chart
- ☐ Box Plot
- ☒ Both a and c

||□ What type of visualization is most effective for comparing multiple categories in IBM Watson? 

- ☒ Bar Chart
- ☐ Scatter Plot
- ☐ Heatmap
- ☐ Violin Plot

||□ Which type of visualization is best for showing relationships between two continuous variables? 

- ☒ Scatter Plot
- ☐ Pie Chart
- ☐ Bar Graph
- ☐ Treemap

||□ Heatmaps in IBM Watson Studio are commonly used for: 

- ☐ Showing relationships between categorical variables
- ☒ Visualizing correlation between numerical variables
- ☐ Creating pie charts
- ☐ Displaying time-series data

||□ IBM Watson Studio can integrate data from which sources? 

- ☐ Cloud databases
- ☐ CSV and Excel files
- ☐ APIs and IoT devices
- ☒ All of the above

||□ What is an advantage of using Watson's AI-powered visualizations? ✓

- ☒ It predicts patterns in the data
- ☐ It replaces human analysts completely
- ☐ It does not require any data preparation
- ☐ It only supports pre-defined charts

||□ IBM Watson can suggest the best visualization type based on: ✓

- ☒ Data structure and relationships
- ☐ Random selection
- ☐ User preferences only
- ☐ Pre-defined templates

||□ Can users customize visualizations in Watson Studio? ✓

- ☒ Yes, users can modify colors, labels, and axes
- ☐ No, visualizations are auto-generated
- ☐ Only developers can modify them
- ☐ It depends on the Watson plan

||□ What type of visualization is recommended for detecting outliers? ✓

- ☒ Box Plot
- ☐ Pie Chart
- ☐ Line Chart
- ☐ Area Chart

In Watson Studio, what feature allows users to create dashboards with multiple charts?

- ☐ Watson Assistant
- ☒ IBM Cognos Analytics
- ☐ Data Refinery
- ☐ AutoML
